

The BPL is a flawed system.

Why is it flawed?

Because it will interfere with other licensed systems, namely amateur.

If this system were to interfere with commercial broadcasters, the proposal would be denied immediately.

But the system only interferes with Amateur operation.

So let's lose the main resource this country has in times of emergency, the citizen who voluntarily donates his time and money to this communications service, to allow another form of internet access.

I'm all in favor of moving forward and progress, but in approving this service you will be destroying another.

Please deny the BPL filing. Especially in this time of homeland security needs. Another form of internet access will do this country no good. The USA needs the citizen ranks of amateur radio operators.

Thank you for your consideration in this matter.
